

## BIO-ARC TECHNOLOGY:

- Allows for full range of motion and greater muscle contraction during full extension outperforming traditional fixed position.
- Maintains hip angle/pelvic tilt to optimize muscle length throughout the entire range of leg extension movement.
- The user's entire body moves along a linear arc trajectory with the machine.
- 200 lbs. weight stack: weight lifted is the approximate combined user's weight and weight selected (see Weight Guide label).

Ht: 58 in/147 cm  
Wt: 550 lb/249 kg
